

AKASH PRIYADARSHI

Self-Taught Developer • AI-Augmented Systems Engineer

Patna, Bihar, India | ydv.akash2006@gmail.com | github.com/AkashPriyadarshii | akashpriyadarshi.vercel.app | LinkedIn

PROFESSIONAL SUMMARY

Self-taught developer and AI-augmented engineer based in Patna, India. Specializes in systems programming with **Rust, Zig, and Go**, Android engineering with **Kotlin and Flutter**, and full-stack web applications with **Next.js**. Proven track record of shipping end-to-end production software: authored a token-efficient grep engine for AI agents (rustygrep), engineered an offline-first UPI expense tracker for India (kharcha), and deployed automated multi-ABI compilation pipelines on GitHub Actions.

TECHNICAL SKILLS

Core Languages: Rust, Zig, Go, TypeScript, Python, Kotlin, Dart
Working Languages: Java, Swift, Shell, PowerShell, PL/pgSQL, SQL
Systems & Architecture: CLI Tooling, Cross-Platform Builds, Token Optimization, Model Context Protocol (MCP) Stdio Servers
Mobile Engineering: Android SDK, Kotlin Coroutines, Jetpack Compose, Flutter, Drift / SQLite, TDLib Native JNI/FFI
Full-Stack & Cloud: Next.js, React, Tailwind CSS, PostgreSQL, Supabase, Docker, GitHub Actions CI/CD, Vercel
AI-Augmented Tooling: Claude Code, MCP Server Architecture, Prompt Engineering, Autonomous Workflow Design

PROJECTS

- rustygrep — Token-Efficient Grep for LLM Coding Agents** [GitHub] Rust • CLI • MCP
- Engineered a high-performance grep utility built on ripgrep core crates with a dedicated `--llm` mode compressing matched code output for agent context windows.
 - Implemented a stdio Model Context Protocol (MCP) server for direct agent tool calling (~1,350 LOC, 6 test suites, Criterion benchmarks, published crate).
- kharcha — India-First Offline UPI Expense Tracker** [GitHub] Flutter • Dart • SQLite
- Built an Android expense tracker auto-capturing Indian UPI payments (GPay, PhonePe, Paytm) via deterministic notification regex parsing.
 - Implemented offline-first local persistence using Drift / SQLite with optional Supabase cloud synchronization across 24 screens/tabs.
- tdlib-android — Precompiled TDLib Distribution for Android** [GitHub] Kotlin • Shell • CI/CD
- Engineered automated GitHub Actions matrix compiling Telegram TDLib native C++ libraries for all 4 Android ABIs (arm64-v8a, armeabi-v7a, x86, x86_64).
 - Published prebuilt AAR binaries on GitHub Releases bundled with Kotlin Coroutines/Flow wrappers, eliminating local NDK builds.
- zcat + repomap — Systems Tooling for AI Coding Agents** [GitHub] Zig • Go
- zcat (Zig):** Drop-in `cat` replacement (~510 LOC) emitting structured JSON output for AI parsers, compiled to a standalone 179KB binary.
 - repomap (Go):** Stdlib-only repository mapper (~835 LOC) ranking files by symbol density to emit token-budgeted code maps (`- -budget`).
- My-Starred-Repos — Auto-Updating Curated Repository Dashboard** [GitHub] Python • PWA • Actions
- Automated dashboard categorizing 800+ developer repos across AI agents, systems, and LLM tooling, refreshed daily via GitHub Actions.
- Personal Portfolio & Sitamarhi Tourism Portal** [Live] Next.js • TypeScript • Cloudflare
- Next.js 16 static-export technical portfolio with MDX engineering blog and automated OG image generation. Sitamarhi cultural tourism portal on Cloudflare Pages.

EDUCATION & LANGUAGES

Class 12 (CBSE): Hellens School (2026) **Class 10 (CBSE):** KV Jawaharnagar (2024) **Languages:** English (Professional), Hindi (Native)
