

Akash Priyadarshi

Self-Taught Developer, AI-Augmented Engineer

Patna, Bihar, India • ydv.akash2006@gmail.com • github.com/AkashPriyadarshii • akashpriyadarshi.vercel.app • [LinkedIn](#)

PROFESSIONAL SUMMARY

Self-taught developer and **AI-augmented engineer** from Patna, India. Builds complete products end-to-end alone: systems tooling in **Rust**, five shipped agent CLIs with 94 combined GitHub stars (the **TypeSafe Jev** ecosystem), Android apps with **on-device Rust cores**, and deployed products on Vercel and Cloudflare Pages.

TECHNICAL SKILLS

Languages (core)	Rust, Zig, Go, TypeScript, Python, Kotlin, Dart
Languages (working)	Java, Swift, Shell, PowerShell, PL/pgSQL, SQL
Systems	CLI tooling, cross-platform builds, token-efficient LLM-agent output, MCP servers
Android	Kotlin, Jetpack Compose, Coroutines, Flow, Room, TDLib, Gradle
Frontend	Next.js, React, TypeScript, HTML/CSS, Tailwind, PWA
Backend & Data	PostgreSQL, Supabase, SQLite (Drift), REST APIs
DevOps & Cloud	GitHub Actions, Docker, Vercel, Cloudflare Pages, CI/CD
AI-Augmented Engineering	Claude Code, MCP, prompt engineering, agent workflow design

PROJECTS

rustygrep • github.com/AkashPriyadarshii/rustygrep	Rust
Grep for LLM coding agents, built on ripgrep's own crates. - - llm mode compresses matched output to save context-window tokens; a stdio MCP server lets agents grep from any tool. ~1,350 LOC, 6 test files, criterion benchmarks, published crate, green CI.	
TypeSafe Jev ecosystem • jev-seo • jev-curate • jev-superpowers • jev-git • jev-scout	Rust
Five shipped CLIs and frameworks for AI coding agents: agent-first SEO and GEO suite with MCP server (jev-seo), synthetic dataset sifter streaming Parquet/JSONL (jev-curate), sub-second git pre-commit and pre-push reflex gate (jev-git), zero-hallucination repo and crate scout (jev-scout), and a systematic agent development framework (jev-superpowers). 94 combined GitHub stars.	
kharcha • github.com/AkashPriyadarshii/kharcha	Kotlin • Rust
India-first UPI expense tracker for Android. Auto-captures payments from SMS and notifications (amount, merchant, reference) with an on-device Rust core (0.18 ms parse); offline-first storage, no cloud dependency.	
tdlib-android • github.com/AkashPriyadarshii/tdlib-android	Kotlin • C++
Precompiled TDLib for Android: a GitHub Actions matrix compiles the native library for all 4 ABIs and ships prebuilt AARs via GitHub Releases and Maven Central (io.github.tdlib-android), no local NDK build. 2,000+ combined downloads, consumed as an Android Gradle dependency. Kotlin Coroutines/Flow wrapper included.	
My-Starred-Repos • my-starred-repos.vercel.app	Python • PWA
Self-updating dashboard that auto-categorizes 813 curated starred repos (AI agents, systems, LLM tooling) and refreshes daily via GitHub Actions. Live PWA.	

EDUCATION

Class 12 (CBSE) • Hellens School	2026
Class 10 (CBSE) • KV Jawaharnagar	2024
