

Akash Priyadarshi

Self-Taught Developer, AI-Augmented Engineer

Patna, Bihar, India • ydv.akash2006@gmail.com • github.com/AkashPriyadarshii • akashpriyadarshi.vercel.app • [LinkedIn](#)

PROFESSIONAL SUMMARY

Self-taught developer and **AI-augmented engineer** based in Patna, India. Builds complete products end-to-end — systems tooling in **Rust, Zig, and Go**; Android apps in **Kotlin and Flutter**; web apps in **Next.js** — shipping with AI as a force multiplier. Published a token-efficient grep for LLM coding agents (**rustygrep**), built an offline-first UPI expense tracker for India (**kharcha**), and deployed multiple production sites on Vercel and Cloudflare Pages. Strengths: turning ideas into working, deployed products quickly, and writing developer tooling that survives real use.

TECHNICAL SKILLS

Languages (core)	Rust, Zig, Go, TypeScript, Python, Kotlin, Dart
Languages (working)	Java, Swift, Shell, PowerShell, PL/pgSQL, SQL
Systems	CLI tooling, cross-platform builds, token-efficient LLM-agent output, MCP servers
Android	Kotlin, Jetpack Compose, Coroutines, Flow, Room, TDLib, Gradle
Frontend	Next.js, React, TypeScript, HTML/CSS, Tailwind, PWA
Backend & Data	PostgreSQL, Supabase, SQLite (Drift), REST APIs
DevOps & Cloud	GitHub Actions, Docker, Vercel, Cloudflare Pages, CI/CD
AI-Augmented Engineering	Claude Code, MCP, prompt engineering, agent workflow design

PROJECTS

- rustygrep — github.com/AkashPriyadarshii/rustygrep

Rust

Fast grep for LLM coding agents, built on ripgrep's own crates. --11m mode compresses matched output to save context-window tokens, and a stdio MCP server lets agents grep from any tool. ~1,350 LOC, 6 test files, criterion benchmarks, published crate, green CI.
- kharcha — github.com/AkashPriyadarshii/kharcha

Flutter/Dart

India-first UPI expense tracker (Android). Auto-captures payments from UPI push notifications via a regex parser (amount, merchant, UPI reference); offline-first storage in Drift/SQLite with optional Supabase sync. 24 screens/tabs.
- tdlib-android — github.com/AkashPriyadarshii/tdlib-android

Kotlin

Precompiled TDLib for Android: a GitHub Actions matrix compiles the native library for all 4 ABIs and ships prebuilt AARs via GitHub Releases — no local NDK build. Kotlin Coroutines/Flow wrapper included.
- zcat + repomap — github.com/AkashPriyadarshii/zcat | [repomap](#)

Zig • Go

Systems tools for AI agents. zcat: drop-in cat replacement in Zig (~510 LOC + tests + CI) with a --json output mode. repomap: walks a repo, ranks files by symbol/ref density, emits a token-budgeted map (--budget); stdlib-only Go, ~835 LOC + tests.
- My-Starred-Repos — my-starred-repos.vercel.app

Python • PWA

Self-updating dashboard that auto-categorizes 813 curated starred repos (AI agents, systems, LLM tooling) and refreshes daily via GitHub Actions. Live PWA.
- Personal Portfolio — akashpriyadarshi.vercel.app

TypeScript • Next.js

Production portfolio and blog: Next.js 16 static export, 12 MDX posts, 11 projects, automated OG-image pipeline. Deployed on Vercel.
- Sitamarhi Tourism Portal — sitamarhi.pages.dev

HTML • Python

Multi-page tourism portal for Sitamarhi, Bihar (birthplace of Goddess Sita): 5 pages, PWA, visitor counter via Cloudflare Function. Deployed on Cloudflare Pages.

EDUCATION

Class 12 (CBSE) — Hellens School	2026
Class 10 (CBSE) — KV Jawaharnagar	2024

English — Professional Working Proficiency **Hindi** — Native Proficiency
